PROFESSIONAL SUMMARY

MCA graduate (2026) and backend-focused full-stack developer with hands-on internship experience building features for real client applications using JavaScript, Node.js, Express.js, MongoDB, and REST APIs. Independently built a client mobile app end-to-end (React Native + Node.js), integrated third-party POS APIs, and configured LLM-powered AI voice agents for live outbound calling. Eager to bring strong API, database, and testing fundamentals to a Backend or Full-Stack Developer role.

EXPERIENCE

Backend & AI Developer Intern - Mavriq AI **Jan 2026 - Present**

Chandigarh, India

- Configured AI voice agents with structured question-answer flows and system prompts that kept responses accurate and within scope during live calls.
- Evaluated live-call performance on ElevenLabs across multiple LLMs (OpenAI, Gemini, Qwen, DeepSeek) and refined prompts to improve response quality and conversation flow.
- Built backend logic to assign AI agents and map them to phone numbers, powering the outbound calling workflow.
- Integrated frontend inputs with backend AI workflows and ran end-to-end API and live-call tests to identify and debug assignment, response, and integration issues.
- Verified that call data and status updates were reflected correctly on the dashboard through API testing, and validated changes locally before deployment.

Ganesha Dining Group Application - Mavriq AI **2026**

Client Project

- Independently developed the Ganesha Dining Group mobile app end-to-end, building both frontend and backend with React Native, Node.js, Express.js, MongoDB, and Mongoose.
- Designed and built REST APIs and MongoDB data models for outlets, menus, food orders, dine-in reservations, offers, and user feedback.
- Connected React Native screens to backend APIs so outlet and menu data loads and updates dynamically in the app.
- Integrated APIs from the client's existing POS system, tested the data flow, and reported data and integration issues.
- Worked directly with the client to gather requirements, implement changes, and incorporate feedback; used AI coding tools to speed up development and debugging.

PROJECTS

Epuhic - Artist Booking Marketplace - Full-Stack Project **2026**

- Built a full-stack marketplace where users can discover professional artists, browse their profiles, and book them for events.
- Developed the Node.js, Express.js, MongoDB, and Mongoose backend with REST APIs for users, artist profiles, categories, and bookings.
- Implemented user authentication with separate role-based flows for customers and professional artists.
- Integrated the frontend with backend APIs, added input validation and error handling, and tested API endpoints with Postman.

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS
Frontend: React, React Native
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, CRUD Operations
Database: MongoDB, Mongoose
AI & LLMs: AI Voice Agents, Prompt Engineering, ElevenLabs, OpenAI, Gemini, AI-Assisted Development
Tools & Testing: Git, GitHub, Postman, API Testing
Development: Frontend-Backend Integration, Third-Party API Integration

EDUCATION

Master of Computer Applications (MCA) - Panjab University, Department of Computer Science and Applications **2024 - 2026**

Chandigarh

Bachelor of Computer Applications (BCA) - Post Graduate Government College, Sector 11 **2021 - 2024**

Chandigarh

Senior Secondary (CBSE) - Sri Guru Gobind Singh Public School, Sector 35 **2021**

Chandigarh
